## **Miller Mechanical Specialties, Inc. expands geography for sales of GE's Masoneilan product line**

Miller Mechanical Specialties, Inc. (MMS) and GE have reached an agreement allowing MMS to sell the complete line of Masoneilan products from GE in certain additional states.

MMS has represented Masoneilan products since 1952. Beginning March 4, the new distribution agreement will add the states of Minnesota, North Dakota, South Dakota and parts of Wisconsin. This is in addition to MMS' current Masoneilan distribution area of Iowa, Nebraska and Western Illinois.

The Masoneilan product line includes control valves, smart positioners, instrumentation and associated software. With the agreement, MMS will expand its inventory of valves, positioners and spare parts to provide quick shipment for customers across its entire geography.

Factory-authorized service and repair will be provided by Allied Valve, Inc. Three of Allied Valve's facilities in the region are designated as Masoneilan Authorized Repair Centers (MARC), offering timely, cost-effective and factory-authorized service and parts. For more information on service and repairs, contact Allied Valve at 507-263-2251 (MN), 563-359-8100 (IA), or 701-214-5502 (ND).

Announcing the new agreement, MMS President Phil Miller said, "We are thrilled to expand our partnership with GE to cover our complete area of operations. Miller Mechanical Specialties has been a trusted advisor for measurement and control solutions since 1951, and we are proud to represent the highest quality manufacturers of instrumentation, valves, and specialty products.

"It brings enormous value to manufacturers to have a reliable, single point of contact for process measurement and control equipment, support, services and solutions. This agreement means that we now represent two of the world's leading manufacturers- GE GE's Masoneilan product line and Endress+Hauser across our entire geography. Our team complements this high-quality, innovative product offering with our engineering expertise and excellent responsiveness. As a result, we offer customers a single point of contact for the premier, complete process control solution in the region."
